Access and Networks

Information on services that provide all faculty, staff, researchers, and students with access to network connectivity using the USask network.

Access is provided to all faculty, staff, researchers, students with a computer account consisting of a username-called the Network Services Identifier (NSID)-and a password. The NSID is randomly created and consists of three letters followed by three numbers (e.g. abc123). This single digital identity helps to provide a seamless transition between university IT services. The account provides role-based access to university computer and network services such as PAWS, email, password-protected webpages, and the wireless network.
